AI acknowledgement coversheet

This coversheet is designed to help you acknowledge any AI use in your assessment. If your course coordinator provides a course-specific template, please use that instead.

The AI Student Hub has more information about using AI in assessment.

Your details

Name: YINING ZHU

Student Number: s4905388

Assessment details

Course: DECO7230

Assignment: Design Evaluation 3

AI use

Select the option that applies:

☑ Yes, AI tools **have** been used to generate or edit material in this document

☐ No, AI tools **have not** been used to generate or edit material in this document

Details of use

Record the following information when acknowledging the use of AI tools:

- AI tool (e.g. Copilot, ChatGPT, Claude, Gemini)
- description of how you used the tool (e.g. edited, corrected, translated, planned, brainstormed)
- prompt(s) used
- relevant part, section, or page of the assessment
- date.

Complete the table below with this information.

Tool	Use	Prompt(s)	Section	Date
ChatGPT	Helped brainstorm more creative and engaging VR learning tasks	My current tasks mainly involve selecting and grabbing objects, which feels too repetitive. Can you suggest more interesting VR tasks that still support beginner Chinese learning?	Concept Development / Task Design	16/10/2026
ChatGPT	Helped improve Task 2 by making the interaction more playful and active	How can I make Task 2 more interesting than simply picking up a book? I want the red book to move or escape so the player has to catch it and put it into the backpack.	Task 2 / Interaction Design	16/10/2026
ChatGPT	Helped fix the size and presentation of vocabulary cards in the VR scene	The vocabulary card looks too large / too small in the headset and the text is hard to read. How should I adjust the Canvas, RectTransform and text size for VR?	VR UI / Vocabulary Card	16/10/2026
OpenAI Codex	Generated an initial, more complex version of Task 2 with multiple interactive objects and several books to create a more game-like VR challenge.	Create a more playful Task 2 with multiple interactive objects and books, so the player needs to search, move and interact with objects instead of only picking up one book.	Task 2 / Early Interaction Design	16/10/2026
OpenAI Codex	Revised the first Task 2 version after it became too complex and difficult to implement and test.	The current Task 2 has too many objects and books and feels too complicated. Simplify the interaction and reduce the number of target objects while keeping the task more interesting than a simple Grab action.	Task 2 / Prototype Simplification	16/10/2026
OpenAI Codex	Assisted with generating and revising Unity C# code for vocabulary cards, task transitions, object interaction and feedback.	Revise the vocabulary cards and task flow. Add feedback and a completion screen, and simplify unnecessary code.	VR prototype development	16/10/2026
OpenAI Codex	Assisted with restoring the intended learning and task flow after an earlier code revision accidentally skipped parts of the learning process.	Restore the original flow: Introduction → Learn 6 vocabulary words → Preparation screen → Task 1 → Task 2 → Completion. Only remove the vocabulary cards that pop up when clicking or grabbing objects inside the room. Do not remove the initial learning cards.	Learning Flow / Task Logic Debugging	18/10/2026

OpenAI Codex	Assisted with fixing object positions that changed unexpectedly when Task 1 started.	When Task 1 starts, the computer and books move from their original positions. Keep the books on the desk, not on the keyboard, and restore the computer to its original position. Do not change the other objects.	Scene Object Placement / Task 1 Debugging	18/10/2026
OpenAI Codex	Assisted with debugging object placement, book movement, bag detection and obstructed task instructions.	Keep the books on the desk, restore the computer's position, check bag completion detection and make the Task 2 instructions visible.	Prototype debugging and refinement	20/10/2026
OpenAI Codex	Explained the purpose of scripts and important code blocks, and supported preparation for the tutor meeting.	Explain each script in simple language and ask me practice questions about how the functions work.	Code understanding and meeting preparation	20/10/2026
OpenAI Codex	Assisted with adding a VR controller instruction UI to explain the Select and Grab controls before the task started.	Add a simple controller instruction panel before the task so users can understand how to Select and Grab objects with the VR controllers. Keep the instructions clear and easy to read in the headset.	Controller Instructions / VR UI	21/10/2026
OpenAI Codex	Assisted with revising the controller instruction UI after the first version caused display or interaction problems.	The controller instruction panel is affecting the task UI / is not displaying correctly. Please revise the layout and code so the instructions appear at the correct time and do not block the task content.	Controller UI Debugging	21/10/2026
DeepL	Translated my Chinese notes and draft ideas into English	Translate my Chinese design notes into clear English for a university assignment.	Evaluation Report	24/10/2026
ChatGPT	Checked grammar and improved the clarity of my English writing	Check report for grammar and spelling mistakes.	Evaluation Report	24/10/2026
